

How does the app work?

From team management to live matches and statistics - the complete workflow at a glance.

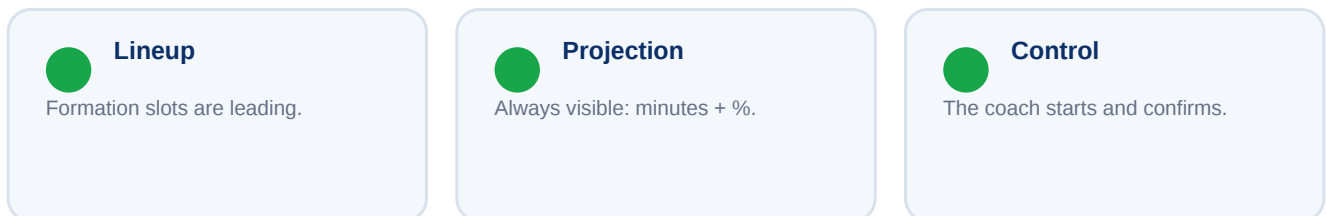

In short

Hockey Coach Assistant helps you prepare a match, manage the lineup, create a logical substitution schedule and record live match events. The coach stays in control: the app supports and calculates, but does not start or change a match without your action.

The match flow

What HCA keeps consistent

Step by step

1. Set up your team

- Create or select a team and configure team name, season, colour and default formation.
- New matches inherit the team defaults.
- When you select a club from the catalogue, HCA uses the club data and fixed catalogue logo.

2. Manage players

- Add players with name, shirt number and hockey role.
- Assign one or more preferred lines: DEF, MID and/or ATT.
- With multiple preferred lines you can define a split, for example 70% DEF and 30% MID.
- Rating/playing priority and maximum playing time together determine the target playing time.

3. Match & selection

- Create a match and choose home/away, opponent, date and match duration.
- Build the selection and register absences, injuries and guest players.
- The match uses its own snapshot; match-specific choices do not alter the team player profile.

4. Build the lineup

- The lineup follows the selected formation and exact formation slots.
- Drag players to positions or fill from the list.
- A match-specific DEF/MID/ATT change only affects that match.
- The playing-time projection remains visible under Lineup and shows both minutes and percentage.

From substitutions to statistics

5. Configure substitutions

- Choose a method: Within lines only, Preferred lines or Preferred positions.
- Set first substitution time, interval and maximum simultaneous substitutions.
- The interval is a guideline: HCA may shift a moment slightly to improve the distribution.
- Review the projection and adjust the proposed schedule manually if needed.

6. Coach live

- The match only starts after a separate press on Start match.
- Record substitutions, goals, assists, attempts, cards, penalty corners and injuries.
- When circumstances change, HCA can recalculate the remaining schedule.

7. After the match

- Review actual playing time and player/match statistics.
- Share or export available overviews.
- Finish the match from Live; if started by mistake, reset to pre-match without losing the preparation.

Tip

Tip: use team defaults for your normal workflow and only change what is genuinely different for a specific match.
